

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

best for all. As it will be possible for any ornithologist, eager to advance our knowledge of this science, to become an active member, and the association members being those who aid us by reporting all the observations they are enabled to make, but who, either from business or any other cause, cannot give as much time to the subject of governing the Chapter, as is necessary to intelligent action, and who now omit to vote when opportunity offers, the government of our affairs will not be practically changed from the present condition.

Therefore as the proposed change can do no injury but will give more stability to our organization, it should be made, unless a stronger sentiment against it should be manifested than any yet observed.

If this plan is adopted, all present members will become active members, who qualify for membership within a reasonable time, after which the selection of active from associate members will be made by the active members, semi-annually, on recommendation by the Executive Council.

REPORT OF THE MELOLOGICAL COMMITTEE.

Mr. President and Members of the Chapter:

Considering that this committee of the Chapter was not organized until the latter part of last May, and then with only three members, including myself, the work accomplished has been quite satisfactory.

The songs of several of our birds have been investigated, and considerable data of a miscellaneous character has been collected; but not sufficient to form any tables or deductions, which are, of course, very desirable and which we earnestly hope to present another season.

The difficulty in studying the songs of birds intelligently is great, and a certain knowledge of their habits and of their common, and also of their scientific names is requisite. It also requires great patience and perseverance.

In the report now before you we have endeavored to incorporate the subject-matter of all data collected by us, and to present it in a form satisfactory to all; and if in any way we are mistaken in
